FOR IMMEDIATE RELEASE

Fast Wrap Provides Essential Services to Construction Industry

RENO, Nev. (January 31st, 2010) – So many benefits are provided to the construction industry by [Fast Wrap](#), it's difficult to find a starting point. In just its third year of existence, with more than 60 franchises across the U.S., and many more expected in 2010, Fast Wrap has developed a niche within the construction and renovation world that is positively unrivaled.

Take an innovative technique of mobile shrink wrap asset protection unlike anything else out there. Add to it a specialized film with anti-microbial, weather-resistant and nearly 100% UV protection properties. Then top it off with the fact that size is never an object for services, and that only environmentally-conscious, easily-recyclable materials are used, and you have the answer to many of the construction industry's most prevalent needs today.

New Construction

When structures are being built, and inclement weather arrives or a project hold takes place, there is no simpler or more cost-effective solution for asset protection than Fast Wrap. They are able to shrink wrap entire buildings, no matter the size, on-site and generally the same day.

In addition, Fast Wrap can eliminate the need to transport and store heavy equipment and supplies by protecting them at the site against damage from the elements while not in use. All of these save not only time and effort, but money as well.

Renovations

From housing additions or remodels, to hospital upgrades, Fast Wrap's services have renovations covered, quite literally. With the capability to protect the old from the new, the shrink wrapping resource allows homes and buildings to be safely inhabited or used while undergoing construction.

Fast Wrap is part of a major renovation job, one attracting national attention: the hurricane-proofing of the Louisiana Superdome. The exterior coating being installed by the company offers much-needed defense against any future adverse, weather-caused scenarios that may occur.

Protection from Hazardous Elements

Already one of the most capable methods of weatherization, the shrink wrapping film also has a proprietary “Bio-Shrink” anti-microbial agent integrated within, which enables it to fend off hazardous microbes, mold, mildew and algae. Safe for use by food and health care facilities alike, Fast Wrap’s services are proven to maintain the stringent health code standards required of both.

When older structures undergo asbestos removal, if wrapped, the environment and neighborhood can rest assured they are defended against any adverse effects.

Yet another distinctive use of mobile shrink wrapping is creating a “Safe Space” in which any moisture-created harmful factor is killed simply by coming into contact with Fast Wrap’s film. New or existing portions of a home or building, such as crawl spaces or attics, can be protected with a slightly different method of wrapping, which gives the area a lengthy, healthy, protected lifespan.

Additional Uses

In a time of too many foreclosures and projects being halted, Fast Wrap’s asset protection services prove invaluable. Not only does shrink wrapping offer aesthetic improvement, but it shelters unused or unfinished homes and structures from costly and damaging elements.

###

About Fast Wrap

Fast Wrap is the only national franchisor of shrink wrapping services. Fast Wrap’s fleet of vans provides mobile shrink wrapping that weatherizes and protects recreational vehicles, equipment, farm products, shipping containers, weather-damaged structures and more. The “shrink to wrap” film is recyclable, fire-retardant and comes in four colors, including a proprietary green for environmentally and visually sensitive areas. Franchisees receive extensive training and support through an innovative franchise management system. For more information, call 877-FST-WRAP (378-9727) or visit www.fastwrapusa.com.
