FOR IMMEDIATE RELEASE

Fast Wrap Delivers Worry-Free Weatherization through Containment

Proven, On-Site Protection for Shipping, Industrial Equipment and Disaster Relief

RENO, Nev. (January 30th, 2010) – [Fast Wrap](#)'s pioneering method of asset protection has a wide array of uses in many industrial realms. Efficient and cost-effective, their mobile [Industrial Crew](#) can weatherize and protect equipment, supplies and structures on-site with proven Industrial Wrap, saving time, money and cutting out the middleman. With more than 60 locations throughout the U.S., and expectations to double that in 2010, Fast Wrap is able to service virtually every region in the country.

Fast Wrap Protection

Film used for Fast Wrap's shrink wrapping provides nearly 100% UV protection, defending against sun fade and damage. It is anti-microbial and weather-resistant, providing a surefire barrier against the elements, including saltwater, mold, mildew, wind, rain and snow. Products are also available to assist with individual weatherization needs, such as vents, zippered doors and solar ventilation, to name just a few.

This environmentally-conscious company has devised a [simple recycling program](#) for each job. A postage-paid REBAG kit is provided with each service. Once use is complete, the film may be easily removed and sent off in a postage paid bag for recycling.

Several colors of shrink wrap are offered to suit any need and taste, including a recently-introduced forest green for environmentally sensitive areas or jobs that will be in direct visual contact with the public.

Transportation and Shipping Industry

Generally, when an item is shipped on transport, it is only protected during a portion of the production – shipping – storage phases. Upon arrival, the owner then has to make arrangements to protect it during shipping to its final destination, where it may be stored for an indefinite length of time. Eliminating third party involvement and excess cost completely, Fast Wrap can dispatch its mobile services to the manufacturing plant itself, where items of any magnitude may be wrapped, then shipped directly from there.

"Any investment or asset you can think of can be wrapped." Fast Wrap's Chief Operating Officer Chris MacMillan asserts. "If it can be shipped, we can protect it." Fast wrap has successfully

encapsulated for shipping everything from freight containers, to a military jet and an entire exploratory drill rig...and almost everything in between.

Disaster Relief

When dire circumstances present themselves, Fast Wrap's 24/7 customer service will come to the rescue. Their ability to provide spill and contaminated soil containment, temporary roof structures, enclose entire buildings, plus create temporary shelters for victims and command centers with safe, dry equipment storage is invaluable during catastrophic situations.

To easily collaborate with governmental agencies and insurance companies during critical times, Fast Wrap has equipped their First-Responder vans with satellite telephones. They also partner with local and national relief agencies to provide immediate victim relief, asset protection and sustained support during reconstruction efforts.

Fire damage is also a major market for Fast Wrap's services. Firefighters typically create a hole in the roof of damaged structures for ventilation, and then cover the opening with a tarp that allows wind flap and accidental removal by weather. Fast Wrap eliminates those variable from the equation with sized-to-fit, weather-resistant film, securing the home or building from further harm. In addition, Fast Wrap can protect usable areas of a structure from those with fire-damage.

Industrial Equipment

Supplies and equipment are susceptible to wind and UV damage when stored outside. Fast Wrap can create a conditioned space on-site for pipes, conduits, heavy equipment, tires and anything else made of weather-susceptible materials, saving companies a great deal on warehouse storage and transportation costs.
